

- Cure and absolute leisure in a delightful modern environment •
- Quality medical services •
- Highly competitive qualification of the medical personnel •
- High tech medical equipment •
- Discretion •

## The travel agency Concordia Travel in collaboration with the medical centre Bio Terra Med offer you:

- **Medical services: plastic surgery, body aesthetics treatments, screening of the health state, screening for diagnosing the uterus cancer and the breast cancer, and HIFU treatments (a new solution in treating cancer).**

Established in 2001, Bio Terra Med provides a wide range of medical diagnostic and treatment services at the highest standards of quality and professionalism.

Proficiency and high-end medical services are core of Bio Terra Med's philosophy and quality management system .

The quality of the medical act and the high tech medical equipment guarantee quality health care services and effective tools to solve our patients' health problems.

Confidentiality, teamwork, affability and continuity are the principles we rely on to ensure effectiveness of our services.

- **Booking plane tickets and hotel rooms.**

According to individual preferences, the number of persons and the stay duration you can choose the airline company you want to fly with and the type of accommodation (3,4, and 5 star hotels in Bucharest). The travel agency Concordia Travel will handle the booking of plane tickets, hotel rooms and transportation of the persons throughout the stay.

- **Rest, relaxation and sightseeing.**

After finishing the medical treatment, you can enjoy the leisure time offered by the host country. You can benefit "hot spot" places, sightseeing and shopping. The schedule can be adjusted to suit individual preferences.

Our local staff can take care of all outings and shall guide you during your stay.

## • Screening for diagnosis of cervical and breast cancer •

Cervical cancer and breast cancer may be diagnosed long before symptoms occur. Early screening ensures maximum chances for an efficient treatment and reliable predictions.

**Screening consists of:**

Gynaecological investigation, Breast examination, Breast ultrasound(panoramic scanning), Transvaginal ultrasound, Pelvic ultrasound, Papanicolaou test, Chlamydia antigen in endocervical specimens, Vaginal specimens culture (microbiologic diagnosis), Mycoplasma h. and Ureaplasma spp. in vaginal specimens.
